

RESEARCH DATA SERVICES

Offering expert data assistance at every stage of the research process.

1: PLANNING

We can assist you with developing a data management plan and designing your planned data analysis, including:

- Implementing plans, using tools, and creating workflows for managing research data
- Advising on study design, power analysis, and choice of statistical methods
- Helping to meet increasingly stringent criteria from funding agencies

2: FINDING & COLLECTING

We have access to thousands of sources of data and experts who will help you:

- Locate, evaluate and format data
- Create metadata and data documentation protocols for new data collection
- Capture data using best practices and appropriate technology

3: ANALYZING

Get expert assistance from statistical, spatial, or media specialists to analyze your data and present your research:

- Learn to use cutting-edge tools and methods
- Experiment with high-resolution visualization technologies
- Develop graphical representations that bring impact to your analysis

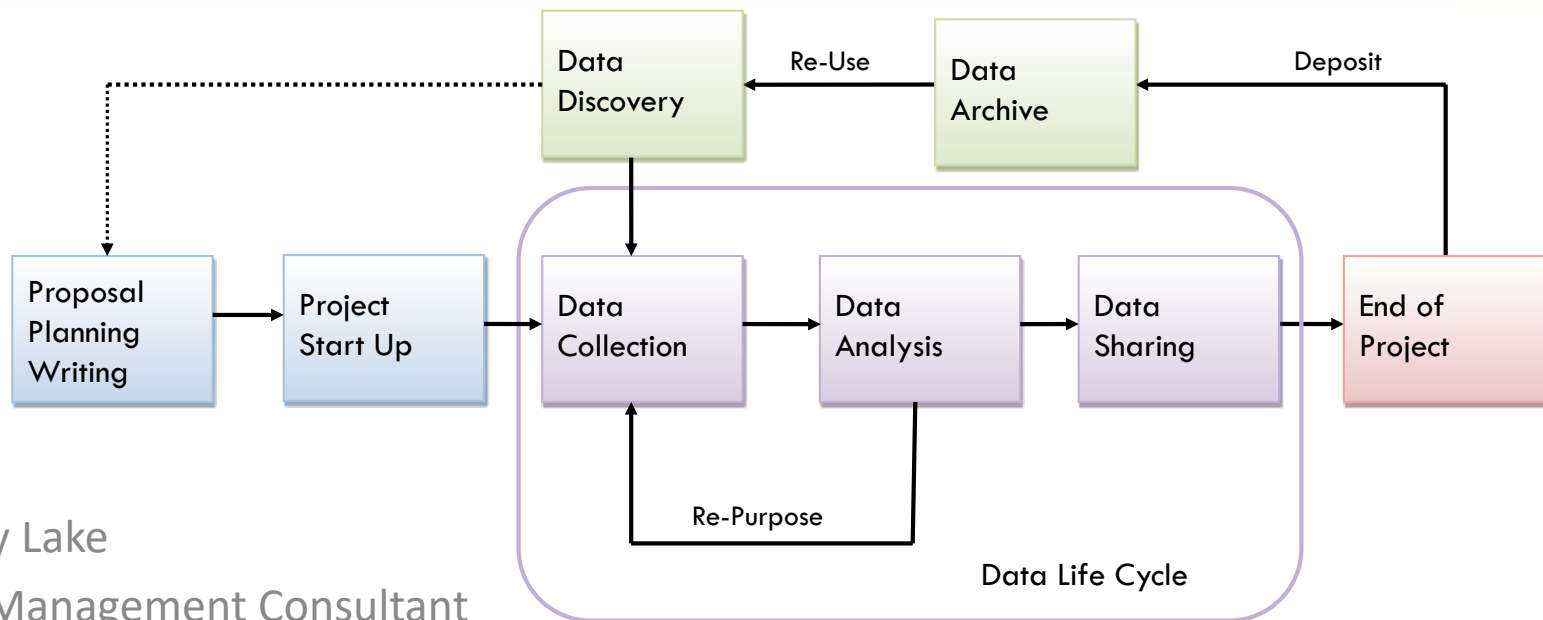

4: SHARING & ARCHIVING

We can consult with you on strategies to help others discover or access your research by:

- Adhering to data sharing policies and norms
- Selecting a data-sharing repository
- Making your data easier to discover and reuse

Creating a Data Management Plan

Sherry Lake

Data Management Consultant

University of Virginia Library

shLake@virginia.edu

November 3, 2014

Road Map

We'll answer four questions in this workshop:

1. What do we mean by data management?
2. Why should you manage your data?
3. What is a data management plan, and why do you need one?
4. How do you create a data management plan?

<https://www.facebook.com/charlottesvillevirginia>: Photo Instagrammer ihugtrees05

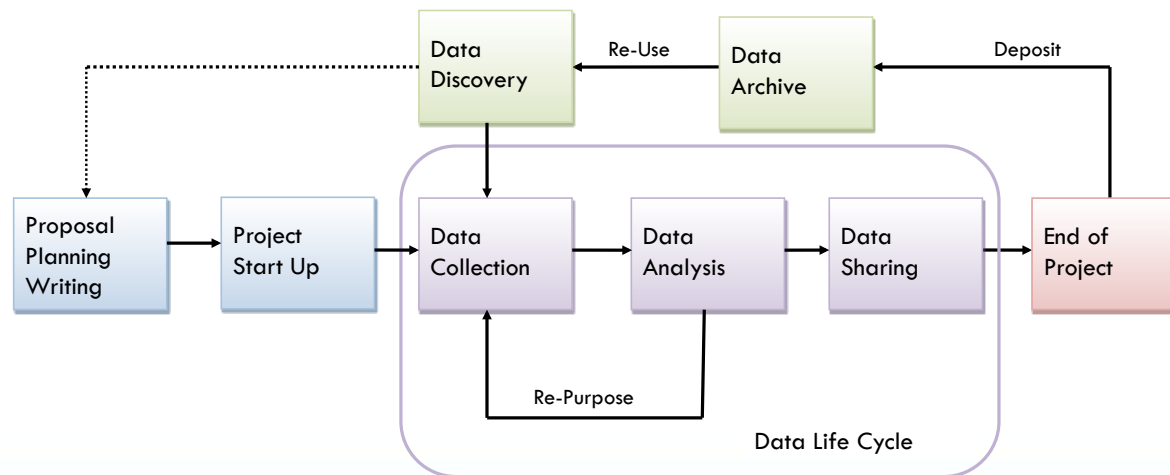

What do we mean by ...

Managing your **Research**

- Ensuring **physical integrity** of files and helping to preserve them
- Ensuring **safety of content** (data protection, ethics, morality, etc.)
- **Describing the data** (via metadata) and recording its history (**provenance**)
- Providing or enabling **appropriate access** at the right time, or restricting access, as appropriate
- **Transferring custody** at some point, and possibly destroying

Managing Data in the Data Life Cycle

- Choosing file formats
- File organization & naming conventions
- Version control
- Access control & security
- Backup & storage
- File format conversions
- Document all project/file details
- Sharing and preservation

(Good) Data Management...

...helps research to be:

Replicated and verified

Preserved for future use

Linked with other research products

Shared and reused

...helps researchers:

Meet funding requirements

Increase visibility of research

Save time and effort (avoid data loss)

Deal with an ever-increasing amount of data

Who Cares about Data Management?

From Flickr by AJC1

www.rba.gov.au

What is a Data Management Plan?

- A comprehensive plan of how you will manage your research data throughout the lifecycle of your research project

AND

- Brief description of how you will comply with funder's data sharing policy
- Reviewed as part of a grant application

Types of Data Management Plans

- Document that is created to manage the data in you lab or project
- Document that is created at the start of a research project (required by funders or publishers)
 - Plan for data sharing
 - Plan based on funder specifications on how to manage your data

Who's Requiring Data Management?

Require a Data Management Plan (DMP)	Require Sharing of Results – per a Data Policy
<ul style="list-style-type: none">• National Science Foundation (NSF)• National Institutes of Health (NIH)• National Oceanographic and Atmospheric Research (NOAA)• Institute of Museum and Library Services (IMLS)• National Endowment of Humanities – office of digital humanities (NEH)	<ul style="list-style-type: none">• Andrew W. Mellon• NASA• NEH – Preservation & Access• IES – Institute of Education Sciences• Wellcome Trust

This list is not inclusive.

What is in a Data Management Plan?

NATIONAL ENDOWMENT FOR THE
Humanities

Parts of a (Generic) NSF Data Management Plan

- I. **Products of the Research:** The types of data, samples, physical collections, software, curriculum materials, and other **materials to be produced in the course of the project.**
- II. **Data Formats:** The **standards to be used for data** and **metadata format** and content (where existing standards are absent or deemed inadequate, this should be documented along with any proposed solutions or remedies).
- III. **Access to Data and Data Sharing Practices and Policies:** Policies for **access** and sharing including provisions for **appropriate protection** of privacy, confidentiality, security, intellectual property, or other rights or requirements.
- IV. **Policies for Re-Use, Re-Distribution, and Production of Derivatives.**
- V. **Archiving of Data:** Plans for archiving data, samples, and other research products, and **for preservation of access** to them.

Grant Proposal Guide (GPG) Chapter II.C.2.j

http://www.nsf.gov/pubs/policydocs/pappguide/nsf13001/gpg_2.jsp#dmp

Department Of Energy Data Management Plan

- I. **Data Types and Sources:** A brief, **high-level description of the data to be generated** or **used** through the course of the proposed research and which of these are considered digital research data necessary to validate the research findings.
- II. **Content and Format:** A statement of plans for **data and metadata content and format** including, where applicable, a description of **documentation plans**, annotation of relevant software, and the rationale for the selection of appropriate standards.
- III. **Sharing and Preservation:** **Means for sharing** and the rationale for any **restrictions** and a timeline for sharing and preservation
- IV. **Protection:** A statement of plans, where appropriate and necessary, to **protect confidentiality**, personal privacy, Personally Identifiable Information
- V. **Rationale:** A discussion of the rationale or justification for the proposed data management plan
- VI. **Software:** **Software** and data created by funded research must be released with **sufficient descriptions** to facilitate the validation of research results. *(Optional)*

Types of Data & Other Information

- **Types of data** produced
- Relationship to **existing data**
- How/when/where will the data be **captured or created**?
- How will the data be **processed**?
- **Quality** assurance & quality control measures
- **Security**: version control, backing up
- **Who will be responsible** for data management during/after project?

```
/**  
 * Simple HelloButton() method.  
 * @version 1.0  
 * @author john doe <doe.j@example.com>  
 */  
HelloButton()  
{  
    JButton hello = new JButton( "Hello, wor  
    hello.addActionListener( new HelloBtnList  
  
    // use the JFrame type until support for t  
    // new component is finished  
    JFrame frame = new JFrame( "Hello Button"  
    Container pane = frame.getContentPane();  
    pane.add( hello );  
    frame.pack();  
    frame.pack();  
    frame.show();           // display the fra  
}
```

Data & Metadata Standards

- Identify the **formats of data files** created over the course of the project
- What **metadata are needed** to make the data meaningful?
- How will you **create or capture** these metadata?
- Why have you chosen **particular standards** and approaches for metadata?

Policies for Access & Sharing

Policies for Re-use & Re-distribution

- Are you under any **obligation to share** data?
- How, when, & where will you **make the data available**?
- What is the process for **gaining access** to the data?
- Who owns the **copyright** and/or **intellectual property**?
- Will you **retain rights** before opening data to wider use? How long?
- Are **permission restrictions** necessary?
- **Embargo periods** for political/commercial/patent reasons?
- **Ethical** and **privacy** issues?
- Who are the **foreseeable data users**?
- How should your data be **cited**?

Plans for Archiving & Preservation

- **What data** will be preserved for the long term? For how long?
- **Where** will data be preserved?
- What **data transformations** need to occur before preservation?
- What **metadata** or **documentation** will be submitted alongside the datasets?
- **Who will be responsible** for preparing data for preservation? Who will be the main contact person for the archived data?
