DATA PRESERVATION

Best Practices for preserving your research data for future reuse

What types of data do you have?

Digital Data

Analog Data

The goal of data preservation is to ensure that your data is in a sustainable format that can be accessed and reused at some point in the future.

What types of data do you have?

Digital Data

The basics.....

...for digital data

- Locate everything to be saved
- Decide what to keep
- Organize the files
- Save copies in different places & on different media

Digital

Manage the collections

Locate everything to be saved Digital

Where are your data?

- Locate all of your data
- Transfer from older media floppy disks, cassettes,
 8-tracks, CDs
- Download data from social media sites and emails
- Transfer files from cameras and phones
- Collect it in one place
- Create a directory

Decide what to keep

Which research data should I preserve?

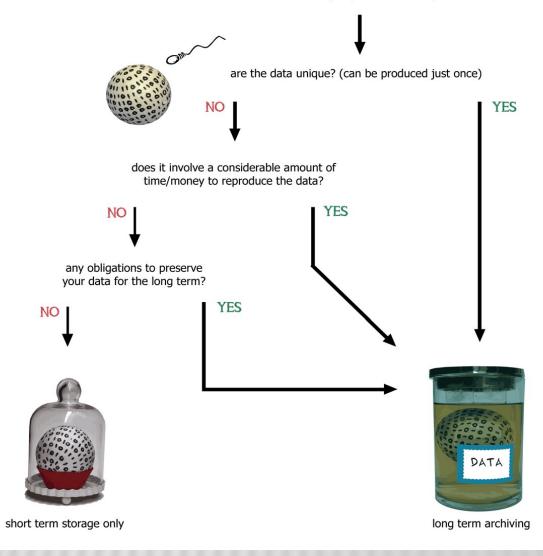

• Obligation to keep it for sharing or reuse

Digital

- Verification of the research
- Value of the data
- Uniqueness of the data
- Raw (primary) or processed (secondary) data
- General historical research (heritage)

Which research data should be archived?

Organize the files

How should I identify my data files?

Digital

- Descriptive file names
- Consistency
- Identify different versions clearly
- Simple folder names
- Include date/time information
- Predictable

Save copies in different places Digital & different media

How should I keep my data?

- Backup your data
- Duplication
- Different formats
- Location, location, location
- 3-2-1
- Threat zones

Manage the collections

How do I actively manage my research data?

Digital

- Visit your data often
- Migrate to newer media
- Migrate to newer formats
- Migrate to newer software
- Verify data consistency
- Keep your directory up to date

What types of data do you have?

Analog Data

The basics.....

...for analog data

- Locate everything to be saved
- Decide what to keep
- Organize the materials
- Scan analog materials into digital copies

Analog

- Preserve your primary source materials
- Manage the collections

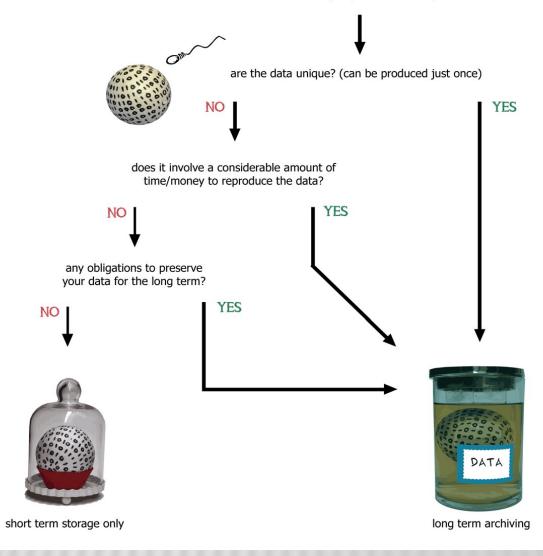

Locate everything to be saved Analog

Where are your (data) source materials?

- Locate all of your source files
- Collect it in one place
- Identify the materials
- Create a directory

Which research data should be archived?

Decide what to keep

Which research materials should I preserve?

Analog

- Obligation to keep it for sharing or reuse
- Verification of the research
- Value of the materials
- Uniqueness of the materials
- Original materials vs. copied materials
- General historical research (heritage or cultural value)

Organize the files

How should I identify my source materials?

Analog

- Descriptive file names
- Consistency
- Identify different versions clearly
- Simple folder names
- Include date/time information
- Predictable

Scan analog materials into Analog digital copies

- Why should I scan my source materials?
- Digital files easier to work with
- Duplication
- Digital copies protect the source materials from wear
- Stable formats for different digital media
- 3-2-1

Manage the collections

How do I preserve my analog research materials?

Analog

- Understand sources of damage
- Recognize signs of deterioration
- Follow best practices for material storage and shelving

Why Materials Deteriorate

Analog

Common Reasons

- Chemical and physical composition
- Storage conditions
- Use and handling

Sources of Damage Effects of poor care

- Prolonged exposure to heat and humidity
- Exposure to light
- Use of acidic adhesives and tapes
- Wear from use
- Poor quality storage materials
 - Alkaline buffered and acid-free papers and boards have only been available for the past 15-20 years.

Analog

Be suspect of plastics of unknown origin

Signs of Deterioration Effects of poor care

- Photos fading and staining
- Documents yellowing or becoming brittle
- Torn or damaged documents
- Rolled and folded items than cannot be flattened without damage

Analog

- Books with loose or detached bindings
- Adhesives yellowing and failing
- Water damage and signs of mold

Storage Practices Best Practices

- Cool and dry environmental conditions
- Provide good air circulation
- Avoid basements or attics for storage
- Do not place shelving along exterior walls or under skylights

Analog

Avoid prolonged exposure to direct sunlight

RESEARCH DATA SERVICES

Offering expert data assistance at every stage of the research process.

1: PLANNING

2222

We can assist you with developing a data management plan and designing your planned data analysis, including:

- Implementing plans, using tools, and creating workflows for managing research data
- Advising on study design, power analysis, and choice of statistical methods
- Helping to meet increasingly stringent criteria from funding agencies

2: FINDING & COLLECTING

We have access to thousands of sources of data and experts who will help you:

- Locate, evaluate and format data
- Create metadata and data documentation
 protocols for new data collection
- Capture data using best practices and appropriate technology

3: ANALYZING

Get expert assistance from statistical, spatial, or media specialists to analyze your data and present your research:

- Learn to use cutting-edge tools and methods
- Experiment with high-resolution visualization technologies
- Develop graphical representations that bring impact to your analysis

4: SHARING & ARCHIVING

We can consult with you on strategies to help others discover or access your research by:

- Adhering to data sharing policies and norms
- Selecting a data-sharing repository
- Making your data easier to discover and reuse

Workshops • 1:1 Consultations • Class Presentations Contact us at researchdataservices@virginia.edu
